

We are a disruptive, next-generation healthcare-tech startup based in Austin, Texas - the Silicon Valley of the South. Established in 2021 by veterans from Flatiron Health and McKinsey, our mission is to bridge the care gap in the U.S. We have secured \$4.3 million in seed funding.

Our revolutionary software offers customizable subscription services, allowing patients and their families to access preventative care and other treatments at reduced prices. We envision a world where financial constraints don't deter individuals from seeking essential healthcare. To know more about us please visit <https://www.subscribili.com/>

Why you'll love about the Internship:

If you are eager to learn, curious by nature, and excited to make a real impact, this internship is for you. At Subscribili, interns take on meaningful projects in a supportive, innovative environment. You'll join a team that values creativity, adaptability, and collaboration, where hard work is balanced with shared success and a sense of fun.

What you'll be doing:

As an Engineering Intern at Subscribili, you will work alongside our talented engineering team to develop and enhance software solutions for providers and patients. Your responsibilities will include building, testing, and refining applications while gaining hands-on experience and learning industry best practices. This role offers the chance to apply your skills, learn new technologies, and contribute meaningfully to impactful projects in a fast-paced, innovative environment.

Key Responsibilities:

- Understand product requirements and develop technical solutions.
- Write clean, efficient, and maintainable code for assigned tasks or modules.
- Participate in code reviews, testing, and debugging to ensure quality and functionality.
- Assist in designing and implementing new features for our product.
- Conduct research on emerging technologies and propose solutions to technical challenges.
- Document processes, technical designs, and code.

Requirements:

- Currently pursuing a degree in Computer Science, Software Engineering, or a related field.
- Passion for technology and eagerness to learn.
- Familiarity with Python and React is preferred; Not mandatory
- Strong analytical and problem-solving skills.
- Excellent Communication skills - both written and verbal.
